32	EU CR1-A	Maturity of exposures	442 (g)	Section 8.2
33	EU CR2	Changes in the stock of non-performing loans and advances	442 (f)	N/A – CFCH does not have such positions.

#	Disclosure	Name	CRR Article	Reference
34	EU CR2-A	Changes in the stock of non-performing loans and advances and related net accumulated recoveries	442 (c), (f)	N/A – CFCH does not have such positions.
35	EU CQ1	Credit quality of forborne exposures	442 (c)	N/A – CFCH does not have such positions.
36	EU CQ2	Quality of forbearance	442 (c)	N/A – CFCH does not have such positions.
37	EU CQ3	Credit quality of performing and non-performing exposures by past due days	442 (d)	Section 8.2
38	EU CQ4	Quality of non-performing exposures by geography	442 (c), (e)	N/A – CFCH does not have such positions.
39	EU CQ5	Credit quality of loans and advances by industry	442 (c), (e)	Section 8.2
40	EU CQ6	Collateral valuation - loans and advances	442 (c)	Section 8.2
41	EU CQ7	Collateral obtained by taking possession and execution processes	442 (c)	N/A – CFCH does not have such positions.
42	EU CQ8	Collateral obtained by taking possession and execution processes – vintage breakdown	442 (c)	N/A – CFCH does not have such positions.
Credit risk mitigation techniques				
43	EU CRC	Qualitative disclosure requirements related to CRM techniques	453 (a) to (e)	Section 8.3
44	EU CR3	CRM techniques overview: Disclosure of the use of credit risk mitigation techniques	453 (f)	Section 8.3
Credit risk – Standardised Approach				
45	EU CRD	Qualitative disclosure requirements related to standardised model	444 (a) to (d)	Section 8.2
46	EU CR4	Standardised approach – Credit risk exposure and CRM effects	452 (g)	Section 8.3
47	EU CR5	Standardised Approach	453 (g), (h) and (i), 444 (e)	Section 8.2
Credit risk – Internal Ratings Based Approach				
48	EU CRE	Qualitative disclosure requirements related to IRB approach	452 (a) to (f)	N/A – CFCH does not apply the IRB Approach.
49	EU CR6	IRB approach – Credit risk exposures by exposure class and PD range	452 (g)	N/A – CFCH does not apply the IRB Approach.
50	EU CR6-A	Scope of the use of IRB and SA Approaches	452 (b)	N/A – CFCH does not apply the IRB Approach.
51	EU CR7	IRB approach – Effect on the RWEAs of credit derivatives used as CRM techniques	453 (j)	N/A – CFCH does not apply the IRB Approach.

#	Disclosure	Name	CRR Article	Reference
52	EU CR7-A	IRB approach – Disclosure of the extent of the use of CRM techniques	453 (g)	N/A – CFCH does not apply the IRB Approach.
53	EU CR8	RWEA flow statements of credit risk exposures under the IRB Approach	438 (h)	N/A – CFCH does not apply the IRB Approach.
54	EU CR9	IRB approach-Back-testing of PD per exposure class (fixed PD scale)	452 (h)	N/A – CFCH does not apply the IRB Approach.
55	EU CR9.1	IRB approach-Back-testing of PD per exposure class (only for PD estimates according to point (f) of Article 180(1) CRR)	452 (h), 180 (1) (f)	N/A – CFCH does not apply the IRB Approach.
Specialised lending and equity exposures				
56	EU CR10	Specialised lending and equity exposures under the simple risk weighted approach	438 (e)	N/A – CFCH does not engage in specialised lending activities.
Counterparty credit risk				
57	EU CCRA	Qualitative disclosure related to CCR	439 (a) to (d)	Section 8.4
58	EU CCR1	Analysis of CCR exposure by approach	439 (f), (g) and (k)	Section 8.4
59	EU CCR3	Standardised Approach – CCR exposures by regulatory exposure class and risk weights	444 (e)	Section 8.4
60	EU CCR4	IRB Approach – CCR exposures by exposure class and PD scale	452 (g)	N/A – CFCH is using SA.
61	EU CCR5	Composition of collateral for CCR exposures	439 (e)	N/A – CFCH has no collateral.
62	EU CCR6	Credit derivatives exposures	439 (j)	N/A – CFCH has no credit derivatives.
63	EU CCR7	RWEA flow statements of CCR exposures under the IMM	438 (h)	N/A – CFCH is using SA.
64	EU CCR8	Exposures to CCPs	439 (i)	N/A – CFCH has no exposure to CCPs.
Exposures to securitisation positions				
65	EU SECA	Qualitative disclosure requirements related to securitisation exposures	449 (a) to (i)	N/A – CFCH does not engage in securitisations.
66	EU SEC1	Securitisation exposures in the non-trading book	449 (j)	N/A – CFCH does not engage in securitisations.
67	EU SEC2	Securitisation exposures in the trading book	449 (j)	N/A – CFCH does not engage in securitisations.

#	Disclosure	Name	CRR Article	Reference
68	EU SEC3	Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as originator or as sponsor	449 (k) (i)	N/A – CFCH does not engage in securitisations.
69	EU SEC4	Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as investor	449 (k) (ii)	N/A – CFCH does not engage in securitisations.
70	EU SEC5	Exposures securitised by the institution - Exposures in default and specific credit risk adjustments	449 (1)	N/A – CFCH does not engage in securitisations.
Market risk				
71	EU MRA	Qualitative disclosure requirements related to market risk	435 (1) (a) to (d)	Section 11.1
72	EU MR1	Market risk under the Standardised Approach (ASA)	445	Section 11.2
73	EU MRB	Qualitative disclosure requirements for institutions using the internal Market Risk Models (AIMA)	455 (a), (b), (c), (f)	N/A – CFCH is a non-trading book institution with minor exposure to market risk and no application of internal models.

123	EU TLAC3b	Creditor ranking - resolution entity	92a	N/A – CFCH is not subject to MREL reporting and not a G-SII.

1. Introduction

1.1 Regulatory background

The Pillar III Disclosure Report (“the report”) for the financial year ending 31 December 2025 is prepared and published at consolidated level of Clearstream Fund Centre Holding S.A. (“CFCH”). Whenever CFCH is mentioned in this report, it refers also to the subsidiary Clearstream Fund Centre Luxembourg S.A. (“CFCL”) – authorised as a Luxembourg credit institution – along with its Cork Branch in Ireland. The subsidiary Clearstream Australia Limited (“CAL”) is excluded from this scope, as it is not part of the CSSF consolidated prudential supervision.

The report adheres to the requirements outlined in Part Eight of Regulation (EU) No.575/2013 (“CRR”) and the supplementary requirements specified in Directive 2013/36/EU (“CRD”), both in their latest consolidated versions effective as of 31 December 2025. The report further complies with related European Banking Authority (“EBA”) Implementing Technical Standards (“ITS”), such as ITS 2021/07 on disclosure of information on exposure to interest rate risk in the banking book¹. Additionally, this report has been prepared in accordance with the requirements set out in Commission Implementing Regulation (EU) 2024/3172 of 29 November 2024, which establishes and incorporates the Implementing Technical Standards (ITS) on public disclosures by institutions into European law. Unless otherwise stated, references are made to the applicable laws and regulations as in force on 31 December 2025.

In accordance with Article 432 CRR, the disclosures contained in this report are subject to the principle of materiality. Within this context, CFCH, together with its subsidiaries, qualifies as a financial holding company under Luxembourg law, pursuant to Article 4 (1) number 20 CRR. In this regard, CFCH classifies as “non-listed other institution” in line with the provisions set out in Article 433c (2) CRR. CFCH does not meet the criteria for large institutions outlined in Article 4 (1) point 146 CRR, nor does CFCH qualify as Global Systemically Important Institution (“G-SII”) or Other Systemically Important Institution (“O-SII”) according to Article 131 CRD.

In compliance with Article 434 CRR, CFCH starting for the reference date 31 December 2025 submits annually electronically in XBRL format to the EBA Pillar 3 Data Hub the relevant disclosure information and in addition also publishes a Pillar III Disclosure Report on the Clearstream website.

All figures in this report are presented in CFCH’s reporting currency Euro (“EUR”). Quantitative disclosures refer to consolidated figures and are expressed in thousands of Euros (“k EUR”), unless stated otherwise. Due to rounding, minor discrepancies may appear in the disclosed figures, which are deemed non-material in accordance with CFCH’s risk profile.

This report does not constitute a set of financial statements and is not subject to external audit. However, certain information presented in this report is derived from CFCH’s audited financial statements as of 31 December 2025. CFCH publishes its annual accounts in compliance with Luxembourg GAAP (LUX GAAP) standards. In contrast, CFCH’s regulatory financial reporting (“FINREP”) is prepared in accordance with IAS/IFRS standards.

¹ CFCH is not subject to the requirements of EBA/ITS/2022/01 concerning disclosures related to ESG risks in accordance with Article 449a CRR.

1.2 Disclosure Policy

In accordance with Article 431 (3) CRR, CFCH has implemented a formal Disclosure Policy to guide the preparation and validation of its Pillar III Disclosure Report. The policy is reviewed and updated annually. The CFCH Board of Directors holds ultimate responsibility for the Disclosure Policy and must approve any changes. The policy specifies the scope of disclosures, assigns roles and responsibilities, and establishes the procedures and internal controls to be followed.

In line with the Disclosure Policy, CFCH must adhere to a specific process when deciding to omit certain disclosures due to immateriality, proprietary nature, or confidentiality. If CFCH classifies certain information as not applicable or immaterial in this report, this is clearly indicated in the corresponding disclosures or in the disclosure index at the beginning of this document.

1.3 Formal attestation

The CFCH Board of Directors attests that the disclosures provided in this report, in accordance with Part Eight CRR, have been prepared in adherence to applicable regulatory requirements and in accordance with established internal policies, procedures, systems, and controls. Additionally, the Board declares that CFCH's risk profile is accurately reflected in the disclosures published in this report. The Board affirms that CFCH's risk management framework is appropriately aligned with Deutsche Börse Group's risk profile and strategic objectives.

In June 2026 the CFCH Board of Directors approved this report for publication and confirmed that CFCH followed the established Disclosure Policy in accordance with Article 431 (3) CRR.

1.4 Shareholding structure

As of 31 December 2025, CFCH was fully owned by Deutsche Börse AG ("DBAG"), its ultimate parent company. In accordance with Article 4 (1) number 20 CRR, CFCH constitutes a financial holding company based in Luxembourg that directly holds 100% of the shares of CFCL. An overview of the shareholding structure is presented in the following figure.

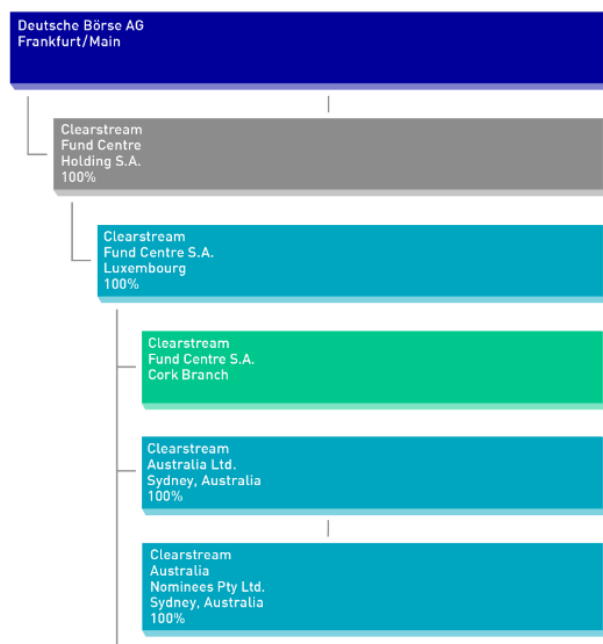

Figure 1: Overview of CFCH's corporate structure²

1.5 Business operations

1.5.1 Clearstream Fund Centre Holding S.A. ("CFCH")

CFCH was established on 26 July 2022 and is fully owned by DBAG. CFCH acts as financial holding company for CFCL, benefitting from an exemption from the licensing requirement for financial holding companies under Article 34-2 (6) of the Luxembourg law of 5 April 1993 on the financial sector ("LFS"), as amended. According to Article 31-2 (6) LFS, as amended, CFCL is included in the scope of consolidated supervision at the level of CFCH.

1.5.2 Clearstream Fund Centre S.A. ("CFCL")

CFCL was established on 16 November 2021 in Luxembourg. It received its banking license to operate as a credit institution in Luxembourg from the European Central Bank ("ECB") on 27 October 2022, in accordance with Article 3 LFS. This was communicated by the CSSF on 7 November 2022, and the license was activated on 30 December 2022. Since then, CFCL has been authorised under Article 2 LFS. CFCL was created to execute DBAG's strategy of separating all activities related to investment funds services and establishing a dedicated infrastructure for investment funds.

CFCL Cork Branch is CFCL's first operational centre outside of Luxembourg. It was incorporated on 31 March 2023 and activated on 1 July 2023. The servicing of mutual and hedge funds, as well as core client services support, previously handled by Clearstream Global Securities Services Ltd., are now exclusively provided by CFCL Cork Branch. CFCL Cork Branch is Clearstream's largest operational centre for investment funds and complements the already existing fund servicing centre in Luxembourg.

The Swiss Financial Market Supervisory Authority ("FINMA") granted approval for the establishment of the Clearstream Fund Centre S.A. Representative Office in Switzerland via

² Citco Global Securities Services Ltd. (renamed Clearstream Global Securities Services Ltd. ("CGSS") in October 2014) transferred its fund activities to CFCL Cork Branch on 1 July 2023; liquidation commenced in 2024 and was completed on 12 November 2025.

Clearstream Fund Centre AG (“CFCS”) on 29 September 2023. The Zurich-based office represents Clearstream Fund Services (“CFS”) to existing and prospective CFCL clients in Switzerland and undertakes general sales and marketing activities to acquire new customers on behalf of CFCL, in compliance with all applicable laws and regulations governing CFCL, CFCS, and the CFS business.

1.5.3 Clearstream Australia Limited, Sydney, Australia (“CAL”)

Clearstream Banking S.A. (“CBL”) successfully acquired Ausmaq Limited, Sydney, Australia, (“CAL”) during the third quarter of 2019. With this acquisition, Clearstream is further expanding its offering in the investment funds space and has entered the Australian market. Ausmaq Limited has been a wholly owned subsidiary of CBL since 31 July 2019. In June 2020 it was renamed Clearstream Australia Limited. Following the carve out of the funds business and the establishment of CFCL, all shares in CAL held by CBL were transferred to CFCL.

1.5.4 Clearstream Australia Nominee Limited, Sydney, Australia (“CAN”)

Clearstream Australia Nominee Limited (“CAN”) was registered in June 2020 as a nominee company wholly owned by Clearstream Australia Limited. CAN was established to hold the assets of CAL’s clients. As custodian, CAL exercises control over CAN and administers the assets on behalf of its clients, who are the beneficial owners of the underlying managed funds.

2. Governance

(Article 435 (2) (a), (b) and (c) CRR)

In accordance with Article 435 (2) (a), (b) and (c) CRR, the qualitative information on CFCH's governance arrangements is disclosed in the following sections.

Table EU OVB – Disclosure on governance arrangements

CRR Article	Row number	Free format	Section
435 (2) (a)	(a)	The number of directorships held by members of the management body.	Section 2.1.1 Section 2.2.1 Section 2.2.2
435 (2) (b)	(b)	Information regarding the recruitment policy for the selection of members of the management body and their actual knowledge, skills and expertise.	Section 2.1.1 Section 2.2.1 Section 2.2.2
435(2) (c)	(c)	Information on the diversity policy with regard of the members of the management body.	Section 2.1 Section 2.2

435(2) (e)	(e)	Description on the information flow on risk to the management body.	N/A – CFCH is not a large or listed institution.

2.1 General arrangements – CFCH

CFCH is established in Luxembourg as a public limited company (“Société Anonyme”). CFCH has a Board of Directors, whose members manage its operations in compliance with all relevant laws and regulations. As the direct parent of CFCL, CFCH is recognised as a parent financial holding company in Luxembourg under Article 1 (6b) LFS, as amended.

CFCH has established a thorough suitability assessment policy, accompanied by a side-letter that outlines specific job descriptions for members of the Board of Directors. This policy aims to ensure that Board members meet the criteria for reputation, experience, and governance, as specified in the joint European Securities and Markets Authority (“ESMA”) and EBA “Final Report on the assessment of the suitability of members of the management body and key function holders under Directive 2013/36/EU and Directive 2014/65/EU” (EBA/GL/2021/06, ESMA35-36-2319).

Alongside the suitability assessment policy, CFCH has established several diversity principles for selecting members of the Board of Directors. These principles encompass educational and professional backgrounds, gender, age, and geographical origin. The goal is to ensure a range of perspectives and experiences, fostering independent opinions within the Board of Directors:

- CFCH strives for balanced gender representation;
- The Board's age structure should encompass a wide range;
- The Board should include diverse educational and professional backgrounds; and
- The Board's composition should mirror CFCH's international profile.

The suitability assessment is triggered when a new member is to be appointed or elected to the Board of Directors, if a member resigns, causing significant changes to the management body's composition, in the event of any substantial changes (such as reduced work hours,

changes in the scope or nature of the mandate, or a negative event affecting reputation), and regularly, at least once a year.

To achieve balanced gender diversity and comply with Article 435 (2) (c) CRR, the CFCH Board of Directors has approved the Gender Diversity Policy and set a target to increase the number of the under-represented gender in the management body. The Board members have agreed on a target quota of 20% for the under-represented gender (currently female) in the CFCH Board of Directors by 31 December 2028.

2.1.1 Board of Directors

According to the Articles of Incorporation of CFCH, the Board of Directors shall consist of at least three members. However, if the company has only one shareholder, the number of directors may be limited to one until the ordinary general meeting following the establishment of more than one shareholder. The Board members must meet specific criteria outlined in the Suitability Assessment Policy and comply with regulatory requirements mentioned above. These criteria include, but are not limited to, having an up-to-date understanding of CFCH's business and its risks. The assessment of a member's knowledge, skills, and experience should consider both theoretical knowledge gained through education and training, as well as practical experience from previous roles.

A member of the management body should be regarded as having good repute, honesty, and integrity if there are no objectives and demonstrable reasons to suggest otherwise, and no grounds for reasonable doubt about their good repute, honesty and integrity.

The Board of Directors drafts a job description and a candidate profile for a specific position. Subsequently, the Board identifies and recommends suitable candidates, who are submitted for approval to the general meeting of shareholders. Following selection and nomination, the general meeting of shareholders decides on the appointment of the candidate as a new member. The appointment of Board members requires prior express CSSF approval. In 2025, one new directorship was approved by CSSF.

The Board of Directors typically meets four times per year, with additional meetings held at the discretion of the members. During these meetings, they are briefed on regular business activities as well as all substantial business events. In the event of extraordinary incidents, the CFCH Board of Directors is informed immediately.

The following table depicts the members of the CFCH Board of Directors along with their number of directorships as of 31 December 2025.

Member	Number of directorships
Niels Brab	1
Michèle Bierset	1
Mark Gem	2

Table 1: CFCH Board of Directors members and directorships

2.2 General arrangements - CFCL

CFCL is established in Luxembourg as a public limited company (“Société Anonyme”). Its Articles of Incorporation outline a two-tier board structure, comprising an Executive Board responsible for management and a Supervisory Board responsible for oversight and control. Both Boards operate in compliance with applicable laws and regulations, including the amended Law of 10 August 1915 on commercial companies, the amended LFS, relevant CSSF Circulars (especially CSSF Circular 12/552, as amended), relevant EU frameworks, the Articles of Incorporation, and the internal rules and regulations of both the Supervisory and Executive Boards.

CFCL has established a thorough suitability assessment policy, accompanied by a side-letter that outlines specific job descriptions for members of the Supervisory Board and Executive Board. This policy aims to ensure that the Executive Board members, Supervisory Board members, and key function holders at CFCL meet the criteria for reputation, experience, and governance as specified in the joint ESMA and EBA “Final Report on the assessment of the suitability of members of the management body and key function holders under Directive 2013/36/EU and Directive 2014/65/EU” (EBA/GL/2021/06, ESMA35-36-2319), and the LFS.

Additionally, CFCL has established several diversity principles for selecting members of the Executive Board and Supervisory Board. These principles encompass educational and professional background, gender, age, and geographical origin. The goal is to ensure a range of perspectives and experiences, fostering independent opinions within both Boards:

- CFCL strives for a balanced gender representation;
- The age range of the Board members should be diverse;
- The Boards should include members with varied educational and professional backgrounds; and
- The composition of the Boards should reflect CFCL’s international profile.

The suitability assessment is triggered when appointing or electing a new member to the Executive Board or Supervisory Board, if a member resigns and this results in significant changes to the management body’s composition, in the event of any substantial changes (such as reduced work hours, changes in the scope or nature of the mandate, or negative events affecting reputation), and regularly, at least once a year.

To benefit from a balanced gender diversity and to fulfil the requirements under Article 435 (2) (c) CRR, the Supervisory Board of CFCL has approved the Gender Diversity Policy and decided on a target to increase the number of the under-represented gender in the management body.

The Supervisory Board members of CFCL agreed on a 20% target quota for the representation of the under-represented gender (currently female) in both the Supervisory Board and the Executive Board by 31 December 2027.

The mandate limitation rules outlined in Article 38-2 LFS must be adhered to. As of 31 December 2025, all members of CFCL’s Executive and Supervisory Boards complied with these rules, considering the legal permissibility of mandate aggregation.

2.2.1 Supervisory Board

According to CFCL's Articles of incorporation, the Supervisory Board must have at least three members. These members shall meet specific criteria outlined in the Suitability Assessment Policy and comply with regulatory requirements mentioned earlier. Additionally, the Supervisory Board as a whole must possess the necessary skills, capabilities, and experience to oversee and control the CFCL Executive Board. This includes a thorough understanding of the credit institution's business. Criteria for Board members include having an up-to-date knowledge of the business, the bank, and its risks. The assessment of a member's knowledge, skills, and experience should consider both theoretical knowledge gained through education and training, as well as practical experience from previous roles.

A member of the management body should be considered to be of good repute, honesty, and integrity if there are no objective and demonstrable grounds to suggest otherwise, and no reason to have reasonable doubt regarding their character.

The Supervisory Board approves a job description and candidate profile for a specific position. It then identifies and recommends suitable candidates for approval by the general meeting of Shareholders. After selection and nomination, the appointment of a Supervisory Board member requires prior express approval from the CSSF. Once the CSSF approval is granted, the general meeting of shareholders formally appoints the candidate as a new member. In 2025, one new directorship was approved by CSSF; however, the Shareholder appointed the new director to the Supervisory Board effective 1 January 2026.

The Supervisory Board generally convenes four times a year, with the chairperson having the discretion to call additional meetings as needed. During these meetings, the Board is briefed on regular business activities and significant business events. In the case of extraordinary incidents, the CFCL Supervisory Board is notified immediately.

The following table depicts the members of the CFCL Supervisory Board along with their number of directorships as of 31 December 2025.

Member	Number of directorships
Stephanie Eckermann – Chairperson	1
Dominik Schmidt-Kiefer	1
Labiba Homsy	5
Yves Baguet	1

Table 2: CFCL Supervisory Board members and directorships

2.2.2 Executive Board

According to CFCL's Articles of incorporation, the Executive Board shall be composed of at least three members, who are appointed by the Supervisory Board of CFCL for a period of four years. The CEO serves as the chair of the Executive Board.

The recruitment process for Executive Board members begins with the Supervisory Board approving a job description and candidate profile for the specific position. The Supervisory Board then identifies and approves suitable candidates. Following the selection and nomination of a candidate, the Supervisory Board makes a formal decision. The appointment of a new CFCL Executive Board member requires prior approval from the CSSF.

The recruitment process of members of the Executive Board starts with the Supervisory Board resolving on a job description and candidate profile for a specific position. Afterwards, the Supervisory Board identifies and approves suitable members. After the selection and nomination of a candidate, Corporate Governance Post-Trading prepares a formal decision of the Supervisory Board. In 2025, no new directorship requests were submitted to the CSSF for approval.

The Executive Board manages CFCL in compliance with applicable laws, the Articles of Association, and internal rules and regulations, aiming to create sustainable value while considering the interests of shareholders, employees, and other stakeholders. It is also responsible for establishing a proper business organisation, including effective risk management.

Members of the Executive Board must be professionally qualified and suitable for managing a credit institution, and they must be able to dedicate sufficient time to their responsibilities. They are required to have both theoretical and practical knowledge of the business of a credit institution. Additionally, Executive Board members must possess:

- An understanding of banking and financial markets, particularly within the regulatory framework;
- Knowledge of managing credit institutions; and
- Adequate experience in managerial positions.

The business distribution scheme outlines the allocation of tasks and responsibilities among Board members. However, the Executive Board retains collective responsibility for fulfilling its duties as defined by law and the Articles of incorporation (overall responsibility).

Executive Board meetings are held monthly or more frequently if needed.

The following table depicts the members of the CFCL Executive Board along with their number of directorships as of 31 December 2025.

Member	Number of directorships
Philippe Seyll – Chief Executive Officer	2
Marco Steeg	1

3. Scope of application

(Article 436 CRR)

Table EU LIB – Other qualitative information on the scope of application

While this report includes CFCH, its subsidiary CFCL, and the CFCL Cork Branch, the subsidiary CAL has been excluded. This exclusion aligns with the decision of the CSSF, which, in accordance with Article 19 (2) CRR, has exercised its regulatory discretion to exempt CAL from the scope of consolidated prudential supervision.

Unless otherwise specified, all information in this report pertains to the companies within the regulatory scope of consolidation. The accounting consolidation discussed in Section 6.2 refers to the method used at Deutsche Börse Group level. Given that the differences between the regulatory and accounting scopes are considered immaterial, the disclosure of Table EU LIA and Templates EU LI1 to LI3 have been omitted.

4. Risk management

(Article 435 (1) (a), (e) and (f) CRR)

In accordance with Article 435 (1) (a), (e) and (f) CRR, the qualitative information on CFCH's risk management setup is disclosed in the following sections.

Table EU OVA – Institution risk management approach

CRR Article	Row number	Free format	Section

4.1 Concise risk statement

In accordance with Article 435 (1) (f) CRR, the concise risk statement represents the statement approved by the CFCH Board of Directors on the appropriateness of the risk management system and procedures, as well as the description of CFCH's risk profile in relation to the business strategy.

The following concise risk statement was approved by the CFCH Board of Directors on 10 June 2026.

The concise risk statement focuses on CFCH at the consolidated level. It includes CFCH, the parent financial holding company based in Luxembourg and a direct subsidiary of DBAG, as well as its subsidiary, CFCL, which is authorised as a Luxembourg credit institution, and its Cork Branch in Ireland.

Effective and efficient risk management is vital to protect CFCH's interests, enabling it to achieve its corporate goals and safeguard its continued existence. To this end, CFCH has established a risk management system that includes roles, processes, and responsibilities for all staff. This system is designed to identify and address emerging risks as early as possible. Additionally, the Risk Management function prepares and provides regular comprehensive risk reports to the Authorised Management.

CFCH's risk strategy and risk appetite complement its business strategy by setting limits to define the maximum permissible risk for operational risk, financial risk, pension risk and business risk. The risk strategy achieves this by setting specific requirements for risk management, risk control, and risk limitation. Within CFCH, significant emphasis is placed on the risk treatment process, to ensure that appropriate measures are taken to avoid, reduce, transfer, or, when suitable, consciously accept risk. The business strategy is updated annually and on an ad hoc basis in response to significant business changes. Both internal and external environmental factors, including macroeconomic and geopolitical changes, are considered in the update process. Other factors, such as the material change process view, action plan for projects, and CFCH's investments, are also considered. The Risk Management function ensures the coherence of the risk strategy with the annual business strategy, constantly identifying new risks and potential business threats. Forward-looking risk scenarios are considered to minimise risk exposure to capital and liquidity. The Internal Capital Adequacy Assessment Process ("ICAAP") builds upon the material risks identified in the risk strategy and ad hoc reviews. The implementation of the risk strategy ensures timely and effective risk control within CFCH. The Risk Management function evaluates the information essential for risk control using structured and consistent methodologies.

The outcomes of these assessments are systematically collected and utilised to analyse and manage risks. Risk reports, encompassing both existing and potential risks, are prepared on a regular and ad-hoc basis. These results are integrated into the reporting for CFCH, CFCL and the Deutsche Börse Group level system. Regular risk reports, issued at least quarterly to the management body, include CFCH's risk quantification results compared against established limits. These reports are supported by qualitative risk information, stress test results, and recommendations on capital adequacy. The economic perspective of limit utilisation is reported using a traffic light system to indicate the respective levels of utilisation. The CFCH Board of Directors, along with the CFCL Executive Board, defines and approves the limits as part of the risk appetite outlined in the risk strategy. The risk metrics,

representing the measured risk appetite, can be delineated against red, orange, and yellow thresholds, as approved by the Boards.

The Risk Management function operates in accordance with the following guiding principles, ensuring alignment with the risk management principles at the group level:

- Deliver robust risk management services to clients, fostering the integrity, transparency, efficiency, and safety of capital markets;
- Support CFCH's business strategy by identifying, understanding, and assessing the risks CFCH faces;
- Manage risk effectively in line with the overall quantitative and qualitative risk appetite;
- Enhance strategic decisions related to mergers and acquisitions, new products and services, or technological changes by providing transparency on associated risks and controls.

These guiding principles are complemented and implemented through clear responsibilities, a strong risk awareness and culture, and effective risk communication and reporting:

- **Ultimate responsibilities:** The CFCH Board of Directors, the CFCL Executive Board, and the CFCL Supervisory Board bear ultimate responsibility for the risk strategy by ensuring that it is consistent, complete, sustainable, and up to date. The risk strategy embodies the risk appetite, which defines the maximum loss the Boards are willing to accept, the risk tolerances, and the aspired performance levels. The Boards guarantee the integration of the risk strategy into CFCH's business activities and ensure the implementation of adequate measures, strategies, policies, and procedures.
- **Risk awareness and risk culture:** Risk awareness and a robust risk culture are fostered through appropriate organisational structures and responsibilities, effective processes, and enhanced employee knowledge via regular mandatory training sessions. The adequacy of the risk management and controlling systems is assessed regularly.
- **Risk communication and reporting:** The responsible management bodies are informed in a timely and comprehensive manner about CFCH's risk profile, pertinent risks, and relevant losses. The Risk Management function may issue ad hoc reports when a new risk situation arises or when development in existing risks need to be communicated to the Boards. The internal reporting and communication are complemented by external reporting.

The identified risks are mapped to the internal, annually updated risk inventory. This process aims to ensure that CFCH regularly and systemically identifies and assesses the risks it may face due to its business model and industry environment. For an effective review of the overall risk profile, the risk inventory process encompasses all of CFCH's financial and non-financial activities, subsidiaries, connected entities, and outsourcing arrangements. This approach ensures an adequate risk assessment that covers dependencies on other entities which could materially impact CFCH's risk profile. The risk inventory process undergoes an annual review by the Risk Management function at the legal entity level and is approved by the Authorised Management. According to the risk inventory, CFCH's risk profile comprises four aggregated risk types: operational risk, financial risk, business risk and pension risk.

The risk inventory is grounded in the risk taxonomy, providing a comprehensive and exhaustive list of all potential risk items that CFCH may be exposed due to its current and future business operations. Consequently, it encompasses all known risks. The same risk

taxonomy is used across the Deutsche Börse Group to ensure a consistent and accurate understanding of risks throughout the group. The risk taxonomy is summarised by four levels:

1. **Aggregated Risk Types**, namely Operational Risk, Financial Risk, Business Risk, Pension Risk, and Winding-Down and Restructuring Risk, are derived from the aggregation of the seven Level 2 risk types. Material risks are reflected in both internal and external risk reports.
2. **Risk Types** offer a more granular and manageable categorisation of risks and include the disaggregation of Financial Risk. The seven Risk Types comprise Business Risk, Credit Risk, Liquidity Risk, Market Risk, Operational Risk, Pension Risk, and Winding-Down and Restructuring Risk. Credit, Liquidity, Market and Operational Risks are always material in line with DBG policy.
3. **Risk Clusters** aggregate similar risk items for materiality assessment purposes.
4. **Risk Items** refer to potential sources of risk arising from the Group's current and anticipated business operations.

A range of quantitative and qualitative risk management techniques are employed to monitor and control CFCH's risk profile. By combining these methods, CFCH aims to provide an accurate and comprehensive view of the current risk landscape. The risk-bearing capacity concept guarantees that CFCH can absorb emerging risks, allowing it to take the necessary actions to sustain its ongoing operations. The risk appetite reflects the level of risk CFCH is prepared to accept in conducting its business.

From an economic perspective, the quantitative risk appetite aims to ensure that there is at least a 99.9% probability (meaning no more than once in 1,000 years) that the total capital will not be depleted within the next 12 months. This principle defines the level of risk CFCH must be capable of withstanding and its risk appetite. CFCH's risk appetite framework includes the tools and concepts used to manage risks, with the goal of continuously monitoring and managing risks in line with the established risk appetite.

The allocation of risk-bearing capacity to key risk types, such as operational risk, business risk, and financial risk, with sub-limits for credit risk and market risk, reflects CFCH's risk profile. Additionally, various relevant factors must be considered, including historical values of required economic capital for specific risk types, planned revenue development, operations volume, credit portfolio, and intended model changes for quantifying certain risk types. The determination of risk appetite is made by the Authorised Management, taking into account risk confidence levels and specific risk types.

The quantitative and qualitative aspects of liquidity risk are consistent with and aligned to the institution's business strategy and overall risk appetite. The liquidity risk strategy is just one component of the broader risk strategy. Additionally, the liquidity risk concepts, methodologies, and stress testing framework are aligned with the risk strategy and form core components of the risk appetite framework.

CFCH's liquidity risk appetite is defined as the level of liquidity risk that CFCH is willing to accept in order to pursue its business objectives while meeting regulatory requirements. The objective of CFCH's liquidity risk management is to ensure that all pending payment instructions are processed promptly under both normal and stressed conditions.

In order to identify, measure, and closely monitor its liquidity position, CFCH implemented risk metrics to ensure compliance with the CRR requirements and EBA Guidelines:

- Survival horizon;
- Maximum buffer usage in the first week;
- Minimal liquidity balance;
- Liquidity coverage ratio (“LCR”);
- Net stable funding ratio (“NSFR”).

As of 31 December 2025, CFCH’s intraday liquidity situation was primarily driven by client cash bookings, with no intraday credit lines extended to clients during the year. Intraday liquidity risk is anticipated to gain relevance as the client migration advances.

CFCH has established limits and early warning indicators for LCR and NSFR compliance. The minimum ratio of 100% was consistently exceeded throughout 2025. As of 31 December 2025, CFCH’s LCR was 442.38% and its NSFR was 160.97%.

From an economic perspective, CFCH manages its liquidity adequacy taking into consideration the specific features of its business model and ensuring that the expected outflows are sufficiently covered by internal liquidity. Given CFCH’s specific vulnerabilities, all relevant and quantifiable risks identified in the risk identification process are considered and are assessed under baseline and stressed scenarios.

CFCH calculates a liquidity gap that includes forecasted cashflows for all products and other potential inflows / outflows (e.g. rent, salary, taxes). Additionally, there is a projected view of the available liquidity buffer over time to cover potential liquidity shortfalls. The liquidity buffer of CFCH during 2025 solely consisted of cash held at the central bank.

Both the liquidity gap and the liquidity buffer are calculated in four scenarios as per regulatory requirement:

- Base scenario;
- Idiosyncratic stress scenario;
- Market stress scenario;
- Combined idiosyncratic and market stress scenario.

In 2025, CFCH consistently maintained excess liquidity on a daily basis, and no liquidity shortages occurred during regular business operations. As a result, the CFCH Board of Directors and CFCL Executive Board consider CFCH’s liquidity position and internal liquidity adequacy assessment process (“ILAAP”) to be sufficient to cover all identified liquidity-related risks.

Capital planning is conducted over a three-year time horizon, aligning with Deutsche Börse Group’s strategic planning. The capital plan for CFCH is updated at least annually, with the planning process typically occurring in the fourth quarter each year. Additionally, ad-hoc updates may be required in response to extraordinary events, such as significant business changes, mergers and acquisitions, or regulatory legal changes. In 2025, CFCH effectively managed the risks that it was exposed to, and the results of capital planning indicated that the company is adequately capitalised for the next three years.

CFCH’s governance involves a continuous process of identifying, updating, notifying, assessing, aggregating, and monitoring risks. Rigorous risk identification encompasses both historical and provisioned risks. To enhance understanding and effectively model capital requirements, these risks undergo stress testing. In 2025, CFCH conducted stress tests for all relevant risk categories and subcategories. The results of these tests were compared against the risk-bearing capacity. The conclusion was that even in the worst-case scenario,

potential losses would be covered by capital. CFCH ensures that the institution maintains sufficient internal capital in alignment with its risk profile.

In addition to traditional risk-specific stress tests, which analyse predefined stress scenarios and are reported quarterly, CFCH conducts an annual reverse stress test. This test identifies combinations of eligible stress scenarios that would exceed the entity's available risk-bearing capacity. Insights from reverse stress tests guide further risk mitigation or reduction measures. Additionally, CFCH performs risk-wide stress tests to assess simultaneous impacts across various risk types. The institution has also developed adverse scenarios for capital planning purposes.

As of 31 December 2025, CFCH maintains a total capital ratio of 30.35%, demonstrating that its actual capital holdings, own funds of 183.6m EUR, comfortably exceed the regulatory minimum requirements. CFCH's leverage ratio exceeded the required minimum of 3%, reaching 16.94% as of the end of 2025.

Furthermore, as of 31 December 2025, the required economic capital ("REC") for CFCH is 58.8m EUR. This represents 33% utilisation of the available risk-bearing capacity ("ARBC") for CFCH, which is comfortably within the defined limits and consistent with the risk appetite.

CFCH has rigorously stress-tested various scenarios, benchmarked against the available risk-bearing capacity. The conclusion is that even severe, yet plausible, losses would be adequately covered by capital.

In summary, CFCH has thoroughly identified relevant risks, considered their risk profile, and determined the required economic capital needs. Consequently, its capital position is deemed sufficient to cover all identified risks.

The CFCH Board of Directors and the CFCL Executive Board are confident in the effectiveness of their risk management system. CFCH continuously evaluates its risk environment and profile. Based on stress test results, REC, and the risk management system, the Boards conclude that CFCH's ARBC is sufficient. Additionally, no risks with significant probabilities have been identified that could threaten CFCH's viability. The risk management system is considered adequate for CFCH's business profile and strategy.

Further information on CFCH’s key risk ratios and figures is contained in Template EU KM1 and Table EU OVA, and the various risk type-specific sections of the Pillar III Disclosure Report 2025. Additionally, details are provided in the following referenced sections:

Table 4: Concise risk statement

Transactions involving the group, its affiliates, and related parties primarily arise from outsourcing agreements with other Deutsche Börse Group entities. These agreements resulted from the carve-out of all activities related to investment fund services.

The relationship between CFCH and DBAG is primarily based on ownership and the flow of funds from CFCH to DBAG. Liability for client claims on the cost side and fee-based revenues and net interest income on the revenue side have been transferred from CBL to CFCH.

Since CBL provides outsourcing services to CFCH and interacts directly with the clients, there are reputational risks. These risks stem from potential issues related to service quality, confidentiality, security, and dependency on the outsourcing entity. If CBL fails to deliver the expected level of service or experiences data breaches, it could damage CFCH’s reputation, as clients may not differentiate between the two entities. Additionally, dependency on CBL poses a risk if CBL encounters operational issues.

Beyond reputational risks, CFCH should also consider operational and compliance risks. Operational risks may arise from inadequate or failed internal processes, people, systems, or external events. Compliance risks involve the potential for legal penalties if CFCH fails to adhere to industry laws and regulations, internal policies, or prescribed best practices.

All these risks arising from the outsourcing agreement were considered as operational risks during the risk assessment. Additionally, the Risk Management function actively monitors current macroeconomic and geopolitical risks.

4.2 Risk profile

CFCH categorises risk into four major risk types, each managed and controlled through tailored methods specific to its nature. These risk types include operational risk, financial risk, business risk, and pension risk and are depicted in the following figure.

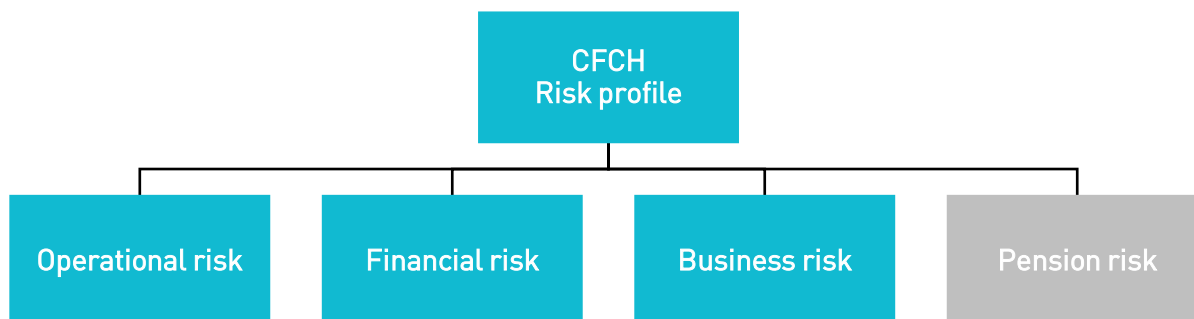

Figure 3: CFCH's risk profile

The risk profile of CFCH significantly differs from that of other financial service providers. While operational risk, business risk and financial risk are considered material, operational risk represents the predominant risk category for CFCH. Conversely, during the risk assessment, pension risk (in the narrow sense) was considered immaterial.

4.3 Risk management framework

CFCH's risk management framework is designed to record, assess, and manage all risks. The framework incorporates procedures for the identification, notification, assessment, treatment, monitoring, and reporting of risks. A risk management system, aligned with the Deutsche Börse Group's overarching strategy, has been established and is applicable to all employees and organisational units. This system is vital for the attainment of business objectives, facilitating the early detection and proactive management of potential risks.

At CFCH, risk is defined as any potential adverse effect on its financial stability, revenue stream, or liquidity position. Based on the nature of the risk, four distinct management approaches are employed: risk reduction (or elimination), risk transfer, risk avoidance, or risk acceptance. Each approach is tailored to address specific risk types effectively.

Regular risk reporting guarantees the availability of accurate data for measurement and control purposes. Robust measures are established to ensure the effective implementation of the strategies, policies, and procedures outlined in the risk management framework.

4.4 Risk strategy and risk appetite

CFCH's risk strategy is closely aligned with its business strategy, detailing the overall risk profile and the limits of risk that CFCH is willing to accept. A key component of the risk strategy and the overarching risk management framework is the risk appetite. Specifically, CFCH's risk appetite framework articulates its risk appetite and establishes limits on the ARBC per risk type. REC is compared with the ARBC, which is defined as regulatory own funds minus adjustments for unrealised losses, primarily due to ongoing litigations, non-consolidated entities, and other potential factors.

As of 31 December 2025, CFCH allocated its ARBC across risk categories as follows:

- **Operational risk:** Max. 55%;
- **Financial risk:** Max. 40%;
- **Business risk:** Max. 5%.

The risk strategy is reviewed and updated at least annually, or more frequently if needed, to reflect changes in both the internal and external business environment. This includes potential threats arising from geopolitical factors, market developments, or regulatory changes that could impact CFCH's earnings or liquidity situation.

4.5 Adequacy of risk management arrangements

During the March 2026 meetings, the CFCL Executive Board and the CFCH Board of Directors concluded that CFCH's risk management arrangements are effective and suitable for its risk profile and strategic objectives, in accordance with Article 435 (1) (e) CRR.

4.6 Risk culture

CFCH promotes a risk-aware culture and a strong sense of accountability by implementing effective organisational structures, streamlined processes, and continuous efforts to enhance employee awareness of risk. The risk culture is defined by individual behaviour, framed by the defined risk appetite, rooted in regulatory compliance, shaped by incentives, and guided by strong leadership.

The risk culture is fundamentally grounded in the Financial Stability Board's four pillars of a robust risk culture: Tone from the top, incentives, accountability, and effective communication and challenge. This framework is designed to promote clear ownership and accountability in managing risk.

To cultivate and reinforce a strong risk culture, CFCH actively supports and initiates educational initiatives aimed at enhancing staff understanding of its risk profile, operational processes, products, relevant markets, and infrastructure. In parallel, risk awareness is promoted by providing mechanisms for employees to report and escalate identified risks and incidents. CFCH also maintains a robust framework for monitoring and regularly assessing emerging risks, changes in risk materiality, and incidents, alongside evaluating management decisions, mitigation measures, and their effectiveness.

To promote a strong risk culture, initiatives like virtual refresher trainings and short case studies are offered on the intranet. Additionally, an annual employee survey helps assess perceptions and guide continuous improvement.

4.7 Risk management process

CFCH's risk management process is based on the three lines of defence model, ensuring a clear segregation of duties within the risk management process. The model divides responsibilities between the risk owners (first line of defence), the Risk Management function (second line of defence) and the Internal Audit function (third line of defence). This structure is designed to prevent control gaps, conflicts of interest, and redundancies. The model supports the implementation of the risk strategy and ensures the maintenance of an effective monitoring system.

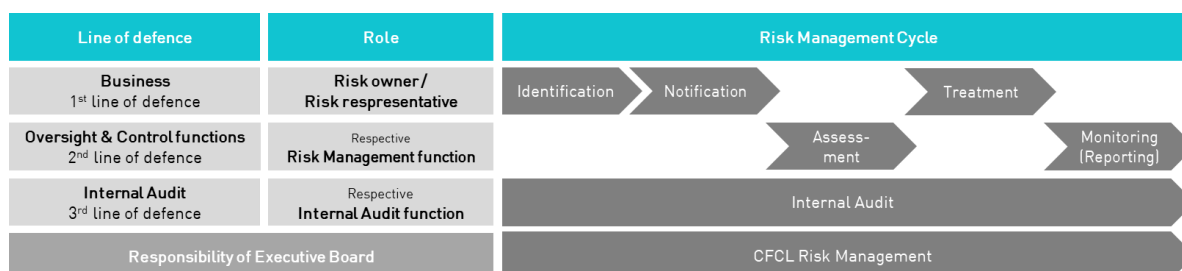

Figure 4: Risk management process

4.7.1 First line of defence

The business units act as the first line of defence and are responsible for identifying and managing risks arising from their day-to-day activities. They operate within the risk appetite defined in CFCH's Risk Strategy. Risks are identified and managed through a risk control framework that is regularly reviewed and aligned with the business strategy. Relevant risk metrics are identified and monitored by the business units. Where risks materialise, the respective risk owners implement appropriate mitigating measures. Lessons learned are subsequently incorporated into business processes, the risk control framework and crisis management arrangements, with implementation led by the responsible business units.

4.7.2 Second line of defence

The Risk Management function operates as an independent second line of defence and ensures the alignment of the risk strategy with the annual business strategy, in particular through the assessment of new and emerging risks. The risk strategy is maintained and regularly updated to reflect developments in the business strategy and the evolving risk environment. The Risk Management function is responsible for preparing, reviewing and updating the risk strategy and submitting it to the relevant Boards for approval.

Additionally, the Risk Management function defines methodological standards for risk management and monitors compliance with internal risk policies across the business divisions. Risk management is a core element of CFCH's overall management and control framework and is essential to safeguarding CFCH's interests, supporting the achievement of its strategic objectives and ensuring its ongoing viability. To this end, CFCH has established a comprehensive risk management system encompassing clearly defining roles, processes and responsibilities applicable across the organisation. This framework is designed to support the timely identification and effective management of emerging risks. In addition, the Risk Management function prepares and submits regular, comprehensive risk reports to the Authorised Management.

4.7.3 Third line of defence

The third line of defence is performed by the Internal Audit function, which independently reviews the risk management framework on a regular basis. The internal audit process provides an objective assessment of the adequacy and effectiveness of CFCH's risk management arrangements, including internal procedures and compliance with applicable regulatory requirements. Internal audit reviews are conducted both on a periodic basis and, where necessary, on an ad hoc basis.

5. Key metrics

(Article 447 CRR)

In compliance with Articles 433c (2) (e) and 447 CRR, CFCH discloses its key metrics annually. The following template provides a semi-annual overview of CFCH's key metrics, including available capital, own funds requirements, capital ratio, leverage ratio and liquidity ratios, for the periods ending 31 December 2025, 30 September 2025, 30 June 2025, 31 March 2025, and 31 December 2024.

6. Own funds and capital adequacy

6.1 Composition of own funds

(Article 437 CRR)

In accordance with Article 92 (1) CRR, CFCH is mandated to consistently maintain an adequate level of regulatory own funds. As of 31 December 2025, CFCH's total own funds are exclusively composed of Common Equity Tier 1 ("CET1") capital, which includes subscribed capital, share premium, retained earnings, and reserves. Deductions from CET1 arise from intangible assets, goodwill, CET1 instruments of financial sector entities in which CFCH holds significant investments, as well as other deductions. The following template presents a detailed breakdown of CFCH's own funds composition as of 31 December 2025. To facilitate comparison with Template EU CC2, as presented in Section 6.2, a corresponding breakdown of CFCL on a standalone basis as of 31 December 2025 has been added.

Template EU CC1 – Composition of regulatory own funds – CFCH consolidated

k EUR		(a)	(b)
		Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
Common Equity Tier 1 (CET1) capital: instruments and reserves			
1	Capital instruments and the related share premium accounts	270,159

6.2 Balance sheet reconciliation

(Article 437 (a) CRR)

In accordance with Article 437 (a) CRR, institutions are required to reconcile their own funds with the audited financial statements. CFCH has applied the exemption under Article 1711-5 of the Law of 10 August 1915 on commercial companies, opting to consolidate at the level of the group's ultimate parent entity, DBAG. As a result, CFCH does not prepare its own consolidated financial statements. While CFCH is subject to consolidated prudential reporting obligations, it is not obliged to prepare consolidated annual financial statements. Consequently, CFCH prepares and publishes its annual financial statements on a standalone basis.

In this context, the following templates are presented at the standalone level of CFCL, which constitutes the main contributor to CFCH's own funds, as illustrated in Template EU CC1 above. The following comparison highlights the differences between CFCL's standalone audited financial statements and its standalone regulatory own funds figures.

It is important to highlight that CFCL's COREP reporting is derived from figures reported under its FINREP submissions. The variances observed between the balance sheet items used in the calculation of regulatory own funds for COREP purposes (as outlined in Template

EU CC1) and those disclosed in the audited financial statements (as presented in Template EU CC2) are immaterial and primarily attributable to IFRS 9-related adjustments. These adjustments predominantly stem from the reconciliation process between Lux GAAP and IFRS, performed in accordance with FINREP reporting standards. Additionally, minor discrepancies may result from fluctuations in foreign exchange rates.

Template EU CC2 – Reconciliation of regulatory own funds to balance sheet in the audited financial statements

k EUR		a	b	c

Table 5: Reconciliation between CFCL standalone FINREP prudential reporting and CFCL audited annual accounts as of 31 December 2025

6.3 Countercyclical capital buffer

(Article 440 CRR)

The institution-specific countercyclical capital buffer addresses the risks posed by the macro-financial cycle to the banking system. It incrementally increases banks' capital requirements when these risks are moderate or high and reduces them when such systemic risks become evident. The buffer is designed to enhance banks' capacity to absorb losses and to ensure a stable supply of financing to the economy.

The following templates provide an overview of CFCH's institution-specific countercyclical capital buffer as of 31 December 2025.

Template EU CCyB1 – Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer

k EUR		a	b	c	d	e	f	g	h	i	j	k	l	m

3	Institution-specific countercyclical capital buffer requirement	4,112

6.4 Capital requirements

(Article 438 (d) CRR)

The following template outlines CFCH's capital requirements for the different risk types and the corresponding calculation methods. Consistent with CFCL's current business model, the majority of the total capital requirements relate to operational risk, followed by credit risk and market risk.

Under Pillar I, CFCH applies the following approaches to determine own funds requirements:

- **Operational risk:** The Standardised Measurement Approach (SMA), in accordance with Part Three, Title III, Chapter 4 CRR;
- **Credit risk:** The Standardised Approach, in accordance with Part Three, Title II, Chapters 2 and 4 CRR;
- **Market risk:** The Simplified Standardised Approach, exclusively applied for foreign exchange risk, in accordance with Articles 351–352 CRR;
- **Counterparty credit risk:** The Standardised Approach for Counterparty Credit Risk (SA-CCR), in accordance with Article 274 CRR;
- **Credit valuation adjustment (CVA) risk:** The Reduced Basic Approach, in accordance with Article 384 CRR.

6.5 Internal capital adequacy

(Article 438 (a) CRR)

Table EU OVC – ICAAP information

CFCH conducts the ICAAP on an annual basis to evaluate the adequacy of its internal capital. The regulatory framework for this risk assessment and the internal capital requirements is defined by the latest consolidated version of the CRD, as amended, and the national regulatory framework in Luxembourg, including the amended LFS, CSSF Circular 12/552, and CSSF Circular 07/301.

The ICAAP must be structured to evaluate the adequacy of internal capital in covering all current and potential risks to which CFCH is exposed. As such, the ICAAP complements regulatory capital requirements by providing a broader, institution-specific perspective. The ICAAP encompasses CFCH's internal procedures and strategies to identify all economically relevant current and future risks and to determine the necessary level of internal capital. CFCH's ICAAP process incorporates a normative and economic perspective, along with comprehensive stress testing, to address all significant risk types faced by CFCH, including operational, credit, market, and liquidity risk. In terms of risk coverage, the overarching objective is to ensure CFCH's long-term viability through the maintenance of sufficient capital buffers at all times.

CFCH's ICAAP undergoes an annual review and is integrated into its monthly and quarterly management reporting.

7. Leverage ratio

(Article 451 CRR)

Table EU LRA – Disclosure of leverage ratio qualitative information

CFCH complies with the leverage ratio requirements set out in Part 7 CRR, which complement the risk-based capital adequacy requirements by serving as non-risk based “backstop” measure that limits the accumulation of excessive leverage in the banking sector, which could threaten the stability of the broader financial system and the economy.

The leverage ratio is a metric used to assess an institution’s exposure to the risk of excessive leverage. CFCH calculates and manages its leverage ratio in accordance with Part 7 CRR. This process involves calibrating its Tier 1 capital measure (numerator of the leverage ratio) and monitoring its exposure measure (denominator of the leverage ratio). Exposures are diligently controlled to ensure continuous compliance with regulatory requirements. Consequently, the leverage ratio is embedded into the risk appetite and is monitored daily. As part of this risk management approach, internal limits have been established to ensure that leverage consistently remains well above the regulatory minimum of 3%.

As of year-end 2025, CFCH’s exposure measure was composed primarily of on-balance sheet items, mainly originating from the Banque Centrale du Luxembourg (“BCL”) reserve, intercompany transactions, and other commercial banking activities such as cash placements with correspondent banks.

In addition, CFCH entered in 2025 into a committed intragroup repurchase transaction facility, whereby excess liquidity is temporarily transferred within the group against high-quality collateral. This structure impacts the composition of the exposure measure and contributed to a decrease in the leverage ratio (see Template EU LR2 below). Further details on this facility are provided in Section 8.1.

As of 31 December 2025, CFCH maintained a consolidated Leverage Ratio of 16.94%, comfortably exceeding the regulatory threshold of 3% as mandated by Article 92 (1) (d) CRR. This robust ratio underscores CFCH’s prudent capital management, reflecting a strong capital base relative to its total asset exposure.

8. Credit risk

8.1 Credit risk management

(Article 435 (1) (a) and (f) CRR)

Table EU CRA – General qualitative information about credit risk

Credit risk encompasses the risk of potential losses arising from counterparties not meeting their contractual obligations, either partially or fully. Measurement criteria include, among other factors, the credit rating of the counterparty, the degree to which a credit line has been utilised, the collateral deposited, and concentration risk.

CFCH's general structure, organisation, and risk management processes, along with its risk strategy, are detailed in Section 4.

In 2025, CFCH established a Board-approved Credit Policy and corresponding Guideline to govern the management of credit risk. In addition, CFCH entered into a committed intragroup repurchase transaction facility, established exclusively for contingency purposes of the respective entity. This facility does not give rise to credit risk, as transactions are executed overnight on a fully collateralised delivery-versus-payment basis.

As of 31 December 2025, CFCH had not granted any credit to counterparties. With the activation of credit services at the beginning of 2026, CFCH's credit risk management framework will fully comply with the requirements set out in Article 435 (1) CRR.

To facilitate cash settlement, intraday secured cash lending and overdraft facilities will be granted to creditworthy counterparties, subject to internal credit assessments and rating assignments in accordance with internal credit rating models and methodologies.

Until such credit facilities are granted, credit risk primarily arises from cash exposures to the BCL, other commercial banking relationships such as cash correspondent banks, and receivables from other entities of Deutsche Börse Group.

Credit risk exposures are determined for risk management purposes using a Pillar II model, which employs a single-factor Merton credit portfolio model. Based on the probability of default, exposure at default, and loss given default for each position within the credit portfolio, a portfolio loss distribution is generated through Monte Carlo simulation of default losses. Utilising a VaR approach, the capital requirements for credit risk are subsequently established as the 99.9% quantile of the loss distribution derived from the simulation.

8.2 General measurement

(Articles 442 and 444 CRR)

Table EU CRD – Qualitative disclosure requirements related to standardised model

CFCH applies the Standardised Approach for Credit Risk in accordance with Part Three, Title II, Chapters 2 and 4 CRR to determine its own funds requirements for credit risk, as required by Article 92 (3) (a) CRR.

Credit risk exposures are classified into the regulatory exposure classes defined in Article 112 CRR, and risk weights are determined on an exposure-by-exposure basis by applying the relevant regulatory rules. Risk weights are not assigned uniformly but depend on the nature of the counterparty, the characteristics of the exposure and, where applicable, the availability of eligible external credit assessments. Exposures are assessed under the Standardised Approach in accordance with Part Three, Title II, Chapter 2 CRR.

For the financial year ending 31 December 2025, no ECAI was nominated. Accordingly, exposures were assigned risk weights based on the applicable regulatory treatment for unrated exposures across the relevant exposure classes.

CFCH was exposed to:

Central banks: 0% risk weight was applied in accordance with Article 114 (4) CRR;

Institutions: 20% risk weight or 150% risk weight was applied in accordance with Article 121 (3) a CRR;

Corporates: 100% risk weight was applied in accordance with Article 122 (2) CRR;

Equity: 250% risk weight was applied in accordance with Article 133 (3) CRR;

Other items: 100% and 250% risk weight were applied in accordance with Article 134 CRR.

As of 31 December 2025, CFCH did not have any non-performing or forborne exposures.

Template EU CR5 includes only the exposure classes and corresponding risk weights for which CFCH holds positions as of the reporting date.

8.3 Credit risk mitigation

(Article 453 CRR)

Table EU CRC – Qualitative disclosure requirements related to CRM techniques

CFCH applies the Financial Collateral Comprehensive Method (“FCCM”) in accordance with Articles 223 and 224 CRR and considers eligible collateral meeting the conditions set out in Articles 197 and 198 CRR, respectively.

The following template illustrates that, given CFCH’s low credit risk exposure, no mitigating measures were applied to on balance sheet exposures as of 31 December 2025. Off balance sheet exposures are not part of Template EU CR3. Mitigating measures will be considered as CFCH’s credit risk exposure increases.

Template EU CR3 – CRM techniques overview: Disclosure of the use of credit risk mitigation techniques

8.4 Counterparty Credit Risk/CVA

(Article 439 CRR)

Table EU CCRA – Qualitative disclosure related to CCR

Counterparty credit risk (“CCR”) encompasses the risk that a counterparty to a transaction may default on its obligations prior to the final settlement of the transaction’s contractual cash flows, thereby giving rise to potential financial loss.

For derivative exposures arising from over-the-counter (“OTC”) derivative transactions subject to CCR, CFCH determines the corresponding RWA by applying the Standardised Approach in accordance with Articles 274 et seq. CRR.

CFCH is not actively engaged in derivative activities. Its use of derivatives is limited to modest overnight positions for the hedging of foreign exchange risk, with no instruments employed to hedge interest rate risk. As of 31 December 2025, the size of CFCH’s derivative business was limited and immaterial relative to CFCH’s total assets.

To limit risks arising from market activities, CFCH has established internal counterparty credit risk limits, which form part of the individual counterparty limit framework. CFCH’s Credit Policy governs the limit-setting process and defines the overall credit risk framework applicable to all CFCH activities. These limits are determined based on the nature of the underlying transactions and an assessment of the counterparty’s overall creditworthiness and are subject to ongoing monitoring as well as annual review and approval by the Authorised Management. In addition, the Credit Policy defines the applicable risk control measures as well as the corresponding risk mitigation techniques.

(Article 445a (1) CRR)

Table EU CVAA – Qualitative disclosure requirements related to credit valuation adjustment risk

CFCH determines CVA own funds requirements in accordance with Article 384 (3) CRR using the Reduced Basic Approach as CFCH does not include any eligible hedges recognised in accordance with Article 386 CRR. Due to the immateriality of the exposure, the monitoring of these positions is limited to completeness, regulatory own funds requirements within the daily monitoring of the Total Capital Ratio and regulatory methodology changes. The Simplified Approach under Article 385 CRR is not applicable for CFCH, as the respective regulatory conditions regarding the derivative volumes are not met.

(Article 435 (1) (a) CRR)

Table EU ORA – Qualitative information on operational risk

CFCH has adopted Basel's definition of operational risk, which identifies it as the risk that deficiencies in information systems or internal processes, human errors, management failures, or disruptions from external events will lead to the reduction, deterioration, or breakdown of services provided by CFCH.

Operational risk constitutes a significant risk category for CFCH, and as such, it is systematically managed and controlled.

CFCH has established segregation of duties and follows the three lines of defence governance concept for the management of operational risk, with the Executive Management holding ultimate responsibility. The main responsibilities for the management of operational risks within the risk management framework are as follows:

- **Executive Management / risk owners:** Establish and oversee the overall framework for managing and mitigating operational risk, appoint risk representatives for the areas under their responsibility, and ensure the existence of a strong risk management culture through the whole organisation;
- **Risk representatives:** Management of the day-to-day risks, serve as key contact for employees and CFCH's Risk Management function, and responsible for identifying, assessing and managing risks within their areas of responsibility;
- **Individual employees:** Identify risks and report them to the risk representative, supporting the stakeholders involved in the risk management process as experts when necessary;
- **Risk Management function:** Assesses and independently monitors the management of operational risk, develops instruments to monitor and control risks, ensures compliance with regulatory requirements, maintains transparency over the risk situation, and oversees CFCH's risk profile.

CFCH's risk strategy focuses on mitigating operational risks to reduce the frequency and impact of financial losses, adhering to international best practices. The Risk Self-Assessment ("RSA"), carried out annually and recorded in the risk register, is CFCH's primary method for assessing operational risk. It aims to provide a thorough and consistent evaluation of CFCH's exposure by identifying and assessing all pertinent operational risks.

The RSA process for assessing risks at CFCH involves the following phases:

- **Identification:** A structured process to obtain a comprehensive and distinct set of risks;
- **Assessment:** Each risk is individually evaluated by the first line of defence, including quantitative impact estimates in RSA workshops organised by the Risk Management function;
- **Review:** The Risk Management function reviews and challenges the assessments to ensure quality, consistency, and eligibility for operational risk quantification.

The RSA process evaluates residual risk, thereby establishing parameters for quantifying operational risk. A loss distribution is determined by a Monte Carlo simulation. In this approach, event frequency is modelled using Bernoulli or Poisson distributions, while loss severity is represented by a lognormal distribution. Capital requirements are determined as the 99.9th percentile (“quantile”) of the resulting loss distribution under the VaR framework.

Furthermore, the Risk Management function conducts regular and ad-hoc stress tests to gauge potential capital vulnerability to exceptional but plausible events. This process includes:

- **Scenario selection:** Scenarios with a probability of severe loss occurring at least once in 1,000 years and a loss amount of at least 1m EUR are automatically considered. Additionally, scenarios with lower frequency or loss amount may also be included;
- **Storyline creation:** Vulnerabilities and risk drivers are combined into storylines, assuming they occur within a short period in stressed situation over one year;
- **Extreme scenarios:** Storylines representing plausible, relevant, but extreme situations are derived from the eligible scenarios, assuming they occur within a short period in a stressed situation over one year;
- **Parameter translation:** Risk drivers and vulnerabilities are combined into scenarios that are then translated into stressed parameters.

Operational risk scenarios are regularly reviewed and updated as needed. Additionally, reverse stress testing is conducted by combining multiple scenarios to identify potential vulnerabilities in CFCH’s operational risk framework at an early stage. Furthermore, operational risk stress testing is incorporated into the annual ICAAP exercise.

The operational risk framework also includes a comprehensive Business Continuity Management System (“BCMS”), established to ensure that business continuity arrangements and plans are kept relevant, up-to-date and operationally ready to respond, minimising the impact of workspace and staff unavailability, and ensuring the continuity of identified mission critical processes.

10.2 General measurement

(Article 446 CRR)

As of 1 January 2025, CFCH calculates its own funds requirement for operational risk using the Standardised Measurement Approach (SMA) in accordance with Articles 314 to 324 CRR.

The SMA is based on the Business Indicator (BI), which serves as a proxy for the size and operational risk profile of the institution. For CFCH, the BI is determined in line with Article 316 CRR and derived from audited profit and loss figures. It comprises the following components:

- Interest receivable and similar income;
- Interest payable and similar charges;
- Income from shares and other variable or fixed-yield securities;
- Commissions and fees receivable;
- Commissions and fees payable;
- Net profit or net loss on financial operations;
- Other operating income.

The Business Indicator is calculated as a three-year average of the above components, measured on a gross basis and adjusted in accordance with the CRR requirements.

Based on the level of the Business Indicator, the BI component (BIC) is determined by applying the relevant marginal coefficients and buckets as set out in Article 317 CRR.

The resulting risk exposure amount is subject to a capital requirement of 8%, in line with Article 92 CRR.

As of the end of the financial year 2025, the total risk exposure for operational risk amounted to 462m EUR, in contrast to 506m EUR reported the preceding year. This decrease is attributable to the decrease in CFCH's gross income during 2025.

11. Market risk

11.1 Market risk management

(Article 435 (1) (a) CRR)

Table EU MRA – Qualitative disclosure requirements related to market risk

Market risk refers to the potential for financial losses in both trading and non-trading portfolios resulting from unfavourable movements in key market variables, such as interest rates, foreign exchange rates, equity prices, commodity prices, and credit spreads.

In accordance with the established investment policy, CFCH does not engage in proprietary trading activities and does not maintain a trading book. At CFCH, market risk primarily arises from foreign exchange (“FX”) risk and interest rate risk in the banking book (“IRRBB”). Additionally, market risk may also stem from exposures to interest rate fluctuations and, to a lesser extent, from equity price risk associated with investments in exchange-traded funds (“ETFs”) tracking major European equity indices.

Responsibility for market risk control lies with CBL Treasury and Liquidity Controls, operating under an established outsourcing agreement. This function ensures adherence to defined risk limits through daily monitoring of exposures and promptly escalates any breaches to the Authorised Management, the Risk Management function, and CBL Treasury. Crucially, the Risk Management function operates independently from the CBL Treasury Front Office, which is responsible for liquidity management and the execution of financial transactions, thereby ensuring a clear segregation of duties and reinforcing the integrity of the risk control framework.

Additionally, the Risk Management function conducts independent controls and monitoring activities to ensure that market risk exposures remain within the predefined limits set out in CFCH’s risk appetite framework. To mitigate CFCH’s exposure to market risk, a VaR method is followed, structured as a scenario-based Pillar II model. This model extends the Standardised Approach for IRRBB to encompass not only interest rate risk but also FX and equity risk.

The risk assessment is calculated for a 250-day holding period at the 99.9th percentile confidence level, in accordance with prevailing regulatory standards. For each asset class – interest rate, FX, and equity – the potential risk is quantified by evaluating the change in the portfolio’s present value under an adverse shift scenario, relative to a baseline scenario using unaltered market data. The REC is derived from the combination of the worst scenario loss of each asset class, thereby ensuring conservative and comprehensive measure of market risk.

Stress testing is conducted quarterly by the Risk Management function and is systematically incorporated into the regular reporting submitted to the Authorised Management. Additionally, CFCH integrates stress testing into its annual ICAAP, leveraging macroeconomic scenarios to assess the potential adverse effects of external shocks on its financial resilience and overall business model.

11.2 General measurement

(Article 445 CRR)

CFCH assesses market risk in accordance with the Simplified Standardised Approach as set out in the CRR. Market risk is defined as the risk of losses arising from adverse movements in market prices, in particular foreign exchange rates, interest rates, equity prices and commodity prices, insofar as such risks are applicable to the institution's business model and balance-sheet structure.

At CFCH, market risk arises from cash positions held with different financial institutions, contributing to interest rate risk. This is further complemented by market risk exposures at the CFCL level, which are predominantly driven by four key sources:

- Participation in CAL, which entails FX risk, particularly with respect to AUD;
- CFCL's allocated share in the pension fund, which contributes to interest rate risk – due to duration mismatches between assets and liabilities – as well as FX and equity risk;
- Cash positions held in bank accounts, which give rise to interest rate risk and FX risk;
- Overnight FX swaps for hedging FX risk.

As of 31 December 2025, CFCH had not engaged in any trading activities. Accordingly, it was subject solely to own funds requirements related to FX risk and IRRBB. No reportable exposures were identified under other market risk categories.

An overview of CFCH's market risk arising from FX positions is presented in the following template.

11.3 Interest rate risk in the banking book

(Article 448 CRR)

Table EU IRRBBA – Qualitative information on interest rate risk of non-trading book activities

CFCH defines interest rate risk as the potential for financial loss arising from structural mismatches in the refinancing of assets and liabilities within the banking book, particularly in response to fluctuations in the interest rate environment. Interest rate risk in the banking book (“IRRBB”) materialises through adverse movements in interest rates that may significantly impact CFCH’s financial position.

To comply with regulatory obligations set forth in CSSF Circular 24/849, which transposes the EBA Guidelines EBA/GL/2022/14 into Luxembourg law, and Commission Delegated Regulation (EU) 2024/856, supplementing CRD with regards to the definition of a large decline in terms of Net Interest Income (“NII”), CFCH conducts a quarterly IRRBB assessment. This process evaluates exposure to interest rate fluctuations through both NII and the Economic Value of Equity (“EVE”). These assessments are based on interest-bearing net positions within the banking book, with results submitted quarterly to the CSSF and reported to the Clearstream Asset and Liability Committee (“ALCO”) and the respective Boards.

In compliance with Article 448 CRR, CFCH discloses changes in EVE, calculated under the six supervisory shock scenarios outlined in Article 98 (5) CRD. Additionally, CFCH reports the impact on NII, assessed under the two supervisory shock scenarios referenced in the same Article.

The IRRBB calculations at CFCH level are performed in accordance with the provisions outlined in the EBA Guidelines (EBA/GL/2022/14). The results are presented in the following template, ensuring both transparency and compliance with regulatory expectations at consolidated level.

CFCH has established a clear risk strategy, incorporating specific risk appetite parameters for both EVE and NII to ensure robust regulatory compliance and internal governance alignment. The results are disclosed for the current reporting period (31 December 2025) and the previous reporting period (31 December 2024), providing a structured overview of CFCH’s IRRBB exposure.

Template EU IRRBB1 – Interest rate risk of non-trading book activities

451a (4)	(i)	A concise liquidity risk statement approved by the management body succinctly describing the institution's overall liquidity risk profile associated with the business strategy. This statement shall include key ratios and figures (other than those already covered in the EU LIQ1 template under this ITS) providing external stakeholders with a comprehensive view of the institution's management of liquidity risk, including how the liquidity risk profile of the institution interacts with the risk tolerance set by the management body.	Section 4.1 Section 12.1.4

		<p>These ratios may include:</p> <ul style="list-style-type: none"> • Concentration limits on collateral pools and sources of funding (both products and counterparties). • Customised measurement tools or metrics that assess the structure of the bank's balance sheet or that project cash flows and future liquidity positions, taking into account off-balance sheet risks which are specific to that bank. • Liquidity exposures and funding needs at the level of individual legal entities, foreign branches and subsidiaries, taking into account legal, regulatory and operational limitations on the transferability of liquidity. • Balance sheet and off-balance sheet items broken down into maturity buckets and the resultant liquidity gaps. 	
--	--	--	--

12.1.1 Liquidity risk profile

CFCH's liquidity risk appetite is defined as the level of liquidity risk that CFCH is willing to accept to pursue its business objectives while meeting regulatory requirements.

The risk acceptance criteria are translated into a limit system and incorporated into liquidity stress tests.

In relation to the limit system and in addition to regulatory ratios, CFCH has defined prudent internal limits to mitigate liquidity risk.

CBL's Treasury function performs the liquidity management of CFCH based on an outsourcing agreement. Treasury closely monitors and manages the liquidity position per currency against expected incoming and outgoing flows as well as CFCH's available resources.

CFCH has implemented a dedicated contingency funding plan with a set of specific contingency measures tailored to CFCH's business model. The liquidity contingency funding plan outlines:

- Roles and responsibilities;
- Liquidity risk management;
- Contingency description and activation process;
- Liquidity contingency measures;
- Escalation procedure;
- Review of the plan.

For further details on CFCH's liquidity risk mitigation, please refer to Section 12.1.6. As of 31 December 2025, no liquidity risk hedging was performed.

The Risk Management function conducts daily liquidity risk assessments, ensuring compliance with established limits and promptly reporting any breaches to the Authorised Management. These assessments include liquidity stress tests, which evaluate whether sufficient resources are available to meet liquidity demands under stressed market conditions within a defined timeframe. These tests incorporate extreme yet plausible assumptions to ensure a rigorous assessment of liquidity resilience.

Stress tests are conducted as follows:

- Daily for internal liquidity metrics;
- Quarterly for LCR and NSFR;
- Reports are submitted to the Authorised Management monthly for internal liquidity metrics, and quarterly for LCR and NSFR.

Based on the results, CFCH evaluates the adequacy of its liquidity sources and makes relevant adjustments, if necessary.

In line with CSSF Circular 09/403, the Board has approved a Liquidity Risk Policy and related Liquidity Risk Guideline defining liquidity management parameters and models. These documents define a structured liquidity risk management approach, including contingency planning, governance, and clearly assigned senior management responsibilities. Any amendments are reviewed by ALCO and approved by the Authorised Management as part of the annual cycle or on an ad-hoc basis, as required.

The operational execution of the liquidity management strategy is handled by the CBL Treasury Front Office, which is responsible for monitoring key performance indicators. Oversight of liquidity risk from a second line of defence perspective is provided by the Risk Management function, which validates assessments, monitors exposures, and conducts reporting. ALCO supervises these activities and provides recommendations to the Boards.

12.1.2 Liquidity strategy

As outlined in Section 4.4, CFCH has established a comprehensive risk strategy that incorporates its liquidity risk appetite. This represents the level of liquidity risk the entity is willing to accept in pursuit of its business objectives while ensuring regulatory compliance.

To operationalise this approach, CFCH has implemented a limit system that translates its risk acceptance criteria into measurable controls. Liquidity stress test results are systematically evaluated to ensure alignment with the established risk appetite.

The primary objectives of CFCH's liquidity risk management arrangements are to:

- Effectively manage its cash position to ensure sufficient liquidity availability at all times;
- Implement contingency measures to address unexpected disruptions in cash flows.

These objectives are achieved through continuous measurement, monitoring, and control of expected and actual cash flows, reinforcing CFCH's commitment to maintaining financial stability.

12.1.3 Liquidity risk governance

Liquidity risk management is embedded within CFCH's organisational framework. The Treasury Front Office, acting as the first line of defence, is responsible for day-to-day liquidity risk management. This function is outsourced to CBL.

The Risk Management function monitors and controls the activities of CBL Treasury Front Office. Both Risk Management function and CBL Treasury Front Office oversee internal liquidity metrics and daily limit observances breaches, including those affecting internal thresholds, are communicated on an ad-hoc basis.

As the second line of defence, the Risk Management function oversees liquidity risk exposure by validating the assessment, monitoring, and reporting activities of the first line of defence. Additionally, the Risk Management function is also responsible for conducting liquidity stress tests (see Section 12.1.5 for further details).

The ALCO monitors all liquidity risk management activities and provides recommendations to the Boards, which ultimately hold responsibility for ensuring the soundness and oversight of CFCH's liquidity risk management framework.

12.1.4 Internal liquidity metrics

To complement regulatory liquidity ratios, CFCH has established several internal liquidity metrics. These metrics are calculated using assumptions tailored to the liquidity risk drivers inherent in CFCH's business model.

- **Liquidity buffer:** As of 31 December 2025, the liquidity buffer comprises own funds held at the BCL and remains comfortably high and stable.
- **Survival horizon:** Refers to the earliest point in time when net liquidity outflows exceed the available liquidity buffer.
- **Maximum buffer usage:** Represents the highest percentage of the utilisation of the liquidity buffer within the first week, specifically to cover projected net liquidity outflows.
- **Minimal liquidity balance:** Minimum liquidity gap account balance after clearing eligible accounts within the first week, calculated across all currencies with cash positions.

12.1.5 Stress testing

CFCH's liquidity risk stress testing framework complies with CSSF Circular 11/506, as amended by CSSF Circular 20/753. The framework is built on internally developed assumptions and methodologies defined in CFCH's liquidity model and risk documentation.

Stress testing covers liquidity risk drivers identified through risk assessments and models contingency situations across various forward-looking scenarios:

- **Idiosyncratic stress scenario:** Assumes additional liquidity outflows resulting from operational risk events;
- **Market stress scenario:** Considers a potential reduction in CFCH's liquidity income from the investment fund services business;
- **Combined stress scenario:** Simulates both idiosyncratic and market stress scenarios jointly.

Stress test projections for regulatory liquidity ratios (LCR, NSFR) incorporate effects from internal liquidity metrics, ensuring a comprehensive approach.

Adverse stress scenarios capture CFCH's material vulnerabilities, which remain significantly reduced under current conditions. However, stress testing continues to apply relevant idiosyncratic, market-wide, and combined risk factors. As of 31 December 2025, the scope is limited to EUR, with foreign exchange exposures to be incorporated into stress effects during 2026 as migration advances.

If a liquidity stress test reveals a breach, meaning liquidity needs exceed available sources on a same-day basis, the Risk Management function reports the breach to ALCO. Based on the analysis, CFCH will review and adjust its contingency funding plan or funding plan as necessary. The Authorised Management will be informed accordingly, and CFCH will assess the adequacy of its liquidity risk framework and liquidity providers, making adjustments if needed.

Throughout 2025, no breaches occurred in the liquidity stress scenarios, neither in the regulatory liquidity ratios nor in the internal liquidity metrics. Stress test results confirmed

that CFCH maintained sufficient qualifying liquid resources to meet its identified liquidity needs at all times.

12.1.6 Risk mitigation

CFCH maintains a defined liquidity buffer in EUR to meet liquidity obligations under both normal and stressed conditions. More details can be found in Section 12.1.4. The following subsections outlines additional measures that can be used in contingency situations.

12.1.7 Contingency funding

The Liquidity Contingency Funding Plan (“LCFP”) defines the funding measures available to CFCH under both normal operating conditions and periods of liquidity stress, thereby demonstrating CFCH’s ability to effectively manage its funding requirements. The LCFP aims to ensure the continuous availability of sufficient liquidity at all times and to mitigate potential adverse effects on the real economy and financial markets.

The LCFP may be activated following a breach of defined liquidity risk indicators. Such breaches are assessed through the established governance process to determine whether contingency arrangements are required. Where applicable, liquidity contingency measures are proposed via the relevant governance bodies and are subject to Board approval.

The LCFP is tested on an annual basis.

12.1.8 Monitoring and reporting

CFCH employs operational and analytical tools to assess liquidity risks, allowing effective monitoring of its actual liquidity position in relation to expected activities and available resources based on account balances and remaining liquidity capacity.

Liquidity risk reporting is conducted in accordance with the Liquidity Risk Policy and the Liquidity Risk Guideline, encompassing daily, monthly, and quarterly monitoring of internal liquidity metrics and regulatory liquidity ratios.

The responsibility for monitoring liquidity risk is distributed among different units. The CBL Treasury & Liquidity Controls unit, under an outsourcing agreement, conducts daily liquidity risk assessments and reports any breaches of liquidity limits to CFCH’s Authorised Management. The Risk Management function is responsible for the daily, monthly, and quarterly monitoring of internal liquidity metrics, while the CBL Supervisory Reporting unit, also under an outsourcing agreement, monitors regulatory liquidity ratios. If a breach is identified in daily calculations, CFCH’s Authorised Management and the ALCO members are informed promptly.

Liquidity risk exposures and limit breaches are addressed through the reporting approach outlined in Section 4.7.5. As part of this framework, breaches are included in the monthly and quarterly risk report submitted to the Authorised Management.

CFCH reviews its ILAAP on an annual basis. The corresponding ILAAP report is developed collaboratively across various units, including first and second lines of defence, under the leadership of the Risk Management function. It is then reviewed by the Compliance unit and the Chief Risk Officer (“CRO”), among others, before being submitted to the Boards for approval and subsequently to regulatory authorities. Internal Audit, acting as the third line of defence, conducts regular audits of the ILAAP process to ensure compliance and effectiveness.

12.1.9 Liquidity adequacy

CFCH ensures liquidity adequacy through its integrated Internal Capital and Liquidity Adequacy Assessment Process (“ICLAAP”), which combines capital and liquidity risk management into a unified framework. This approach enables CFCH to assess, monitor, and manage its liquidity position in line with its business model, strategic objectives, and regulatory requirements.

Liquidity adequacy is assessed from two complementary forward-looking perspectives:

- **Economic perspective:** CFCH considers the specific characteristics of its business model and ensures that expected outflows can be met in a timely and reliable manner, even under stress. This includes the maintenance of internal liquidity buffers and the monitoring of key indicators such as the survival horizon, buffer usage, and minimal liquidity balance.
- **Normative perspective:** CFCH ensures compliance with regulatory liquidity requirements, including the LCR and NSFR. These are supported by internal management buffers and multi-year projections under both baseline and adverse scenarios.

CFCH’s Authorised Management holds ultimate responsibility for the ICLAAP, including the approval of the Liquidity Adequacy Statement (“LAS”), the liquidity risk strategy, and the methodologies used for risk identification, quantification, and stress testing. It also oversees the integration of liquidity and capital planning into CFCH’s overall risk management and decision-making processes.

CFCH’s liquidity governance is structured around the three lines of defence model as outlined in Section 4.7. The first line of defence (e.g. Treasury and business units) manages daily liquidity and implements the liquidity strategy. The second line of defence (the Risk Management function) defines the liquidity risk framework, monitors adherence to risk appetite, and develops stress testing methodologies. The third line of defence (Internal Audit) provides independent assurance on the effectiveness of the ICLAAP.

The ALCO supports the governance process by reviewing key ICLAAP components, including the LAS, and making recommendations to the Authorised Management.

This integrated and forward-looking approach ensures that CFCH maintains sufficient liquidity to meet its obligations under both normal and stressed conditions, while aligning liquidity risk management with its evolving business model.

12.1.10 Liquidity risk adequacy declaration

The Authorised Management annually approves the LAS as part of the ICLAAP, confirming that CFCH maintains sufficient liquidity in line with its risk profile and regulatory obligations. This statement is based on the comprehensive analysis, assumptions, and methodologies outlined throughout the ICLAAP report.

In 2025, CFCH consistently maintained a strong and stable liquidity position. No liquidity shortfalls occurred under business-as-usual conditions, and all payment obligations were met in full and on time. Daily liquidity buffers remained comfortably above internal thresholds, and key indicators such as the LCR, NSFR, survival horizon, buffer usage, and minimal liquidity balance showed no breaches throughout the year.

Stress testing results further confirmed CFCH’s resilience, demonstrating that even under severe but plausible stress scenarios, the institution would retain sufficient liquidity to cover

all identified risks. While client migration and treasury activities (such as access to cash correspondent bank credit lines and participation in the repo market) are anticipated to grow in 2026, CFCH's existing liquidity framework already offers a robust foundation for managing future developments.

In conclusion, based on the 2025 assessment, CFCH's liquidity position is deemed adequate, with appropriate tools, processes, and governance in place to monitor, manage, and report liquidity risk effectively.

12.2 Regulatory liquidity ratios

12.2.1 Liquidity Coverage Ratio

(Article 451a (2) CRR)

Table EU LIQB – On qualitative information on LCR, which complements template EU LIQ1

The Liquidity Coverage Ratio ("LCR") is designed to enhance institutions' short-term resilience to liquidity risks. It requires banks to maintain a sufficient reserve of high-quality liquid assets ("HQLA") that are unencumbered and can be quickly and easily converted into cash in private markets, thereby ensuring their capacity to withstand liquidity stress scenarios over a 30-day horizon. The regulatory framework for the LCR is outlined in Part 6 CRR, in conjunction with Commission Delegated Regulation (EU) 2015/61 ("LCR Delegated Act").

CFCH conducts daily calculations and monitoring of its LCR as part of its robust liquidity risk management framework. In alignment with its defined risk appetite, CFCH maintains internal LCR limits that significantly exceed the regulatory minimum of 100%, thereby facilitating early detection and mitigation of potential adverse developments or liquidity stress events.

As of 31 December 2025, CFCH's liquidity buffer was exclusively composed of central bank reserves, classified as Level 1 eligible HQLA in accordance with Article 10 LCR Delegated Act. Throughout the reporting period, CFCH maintained a conservative risk profile, with no material exposure to derivatives or contingent collateral obligations.

In accordance with Article 415 (2) CRR, CFCH publishes its liquidity reports both in its reporting currency, EUR, as well as in any other currency that represents 5% or more of its total liabilities on the relevant reporting date, excluding own funds and off-balance sheet items. As of 31 December 2025, CFCH liquidity reporting was conducted predominantly in EUR, with CHF and USD being the only other significant currencies.

Throughout 2025, CFCH demonstrated a robust liquidity position, with average quarterly LCR levels ranging from 496.30% to 1,819.34%. A lower LCR ratio with higher business volume is a normal trend, primarily driven by the growth of client deposits.

These levels underscore CFCH's substantial liquidity buffer, significantly surpassing the regulatory minimum requirement of 100%. The following template provides the LCR computation over a 12-month rolling average calculation based on the reporting periods ranging from April 2024 to December 2025.

12.2.2 Net Stable Funding Ratio

(Article 451a (3) CRR)

The Net Stable Funding Ratio (“NSFR”) is designed to foster long-term funding resilience. It ensures that institutions maintain a sound and stable funding structure by requiring that available stable funding (“ASF”) meets or exceeds required stable funding (“RSF”) over a one-year horizon. The NSFR reduces reliance on short-term wholesale funding, mitigates liquidity risk, and promotes alignment between the maturity profiles of assets, liabilities, and off-balance sheet exposures, thereby enhancing financial stability.

Analogous to LCR, CFCH upholds internal NSFR limits that significantly surpass the regulatory minimum requirement of 100%.

As of 31 December 2025, CFCH maintained a robust liquidity profile, evidenced by a year-end NSFR of 160.97 %. This markedly exceeds the regulatory threshold of 100%, reflecting CFCH’s resilient funding structure.

Template EU LIQ2 – Net Stable Funding Ratio

34	Net Stable Funding Ratio (%)					160.97%

13. Other risk types

The following sections have been incorporated into the report to offer further insights into additional risk categories encompassed within CFCH's overall risk profile.

13.1 Business risk

Business risk represents CFCH's exposure to external threats, such as changes in the competitive landscape, macroeconomic conditions, regulatory developments, or political instability, as well as internal vulnerabilities, including suboptimal strategic decisions. This risk encompasses potential adverse impacts from increased competition, unfavourable economic trends, or other factors that may result in revenues falling short of projections or costs exceeding expectations.

CFCH's approach to manage business risk is documented in its risk strategy and frameworks, supported by a control system that ensures the identification, assessment and monitoring of risks that the entity is exposed to, ensuring the timely detection of potential shifts in the underlying risk profile and that these are treated appropriately.

Business risk is quantified using a scenario-based approach that produces a VaR metric. If the calculated VaR exceeds the budgeted earnings before taxes (“EBT”) for the upcoming four quarters, the capital requirement for business risk is determined as the difference between the VaR and the projected EBT. A capital requirement of 0 EUR indicates that the VaR remains below the budgeted EBT threshold.

13.2 Environmental, social and governance risks

(Article 449a CRR)

While CFCH is not obligated to disclose ESG risks under Article 449a CRR and Commission Implementing Regulation (EU) 2022/2453, it acknowledges the increasing importance of these considerations. This section outlines CFCH’s strategic approach for identifying, managing, and integrating ESG risks across its operations and governance framework.

In line with the EBA’s definition (EBA/REP/2021/18), CFCH categorises ESG risks as environmental, social, or governance-related factors that may influence the financial performance or solvency of its entities. These risks are regarded as both risk drivers and transversal elements, with the potential to impact a broad spectrum of financial and non-financial risk categories within CFCH’s risk management framework – including credit, market, liquidity, pension, operational, and business risks.

In 2025, no material ESG risks were identified for CFCH; nevertheless, ESG considerations remained integrated into CFCH’s risk management process. This includes the assessment of ESG factors and their potential short-, medium-, and long-term impacts on CFCH and its business model, the periodic identification and monitoring of ESG-related risks, the enhancement of the risk taxonomy and inventory to capture ESG dimensions, and the execution of ESG-specific stress testing exercises.

CFCH aligns with Deutsche Börse Group’s overarching sustainability and climate objectives, actively contributing to the green transition through the provision of ESG-related data, products, and infrastructure. By embedding ESG considerations into the fund segment and following Deutsche Börse Group’s strategic framework, CFCH ensures that climate and environmental risks are thoroughly integrated into its decision-making processes, operational procedures, employee training initiatives, and stakeholder communications.

CFCH places strong emphasis on workforce diversity, employee engagement, and leadership development, while upholding the principles of market integrity, transparency, efficiency, and operational resilience. By disclosing its sustainability performance, maintaining ESG ratings, and engaging proactively with regulatory bodies, CFCH fosters a transparent, inclusive, and accountable approach to sustainability.

13.3 Exposures to Shadow banking entities

(Article 449b CRR)

In accordance with Article 449b CRR, CFCH provides qualitative information on its exposures to shadow banking entities.

Shadow banking entities are identified in line with the definition set out in Article 4 (1) (155) CRR. The identification and assessment of such counterparties are embedded in the institution's overall counterparty and credit risk management framework and are subject to internal classification and review procedures.

As of 31 December 2025, CFCH has no material risk concentrations towards shadow banking entities. Related risks are assessed as not material to the institution's overall risk profile.

13.4 Exposures to Crypto assets

(Article 451b CRR)

Pursuant to Article 451b CRR, CFCH assesses crypto assets and discloses information on exposures to crypto assets.

As of 31 December 2025, CFCH holds no direct or indirect exposures to crypto assets as defined in Article 5a CRR. Accordingly, no material credit, market or operational risks related to crypto assets have been identified that would require further qualitative or quantitative disclosure at this stage.

Regulatory developments and forthcoming technical standards regarding crypto asset disclosures are continuously monitored to ensure timely compliance.

14. Remuneration

(Article 450 (1) CRR)

The information regarding CFCL's remuneration policy and practices in accordance with Article 450 (1) CRR is summarised in the following sections.

Due to the organisational set-up, CFCH's subsidiary CFCL is responsible for ensuring compliance with prudential requirements on a consolidated basis.

The policy is made publicly available on: <https://www.clearstream.com/clearstream-en/about-clearstream/regulation/remuneration-information-1278092>

14.1 Remuneration Policy

The Remuneration Policy is a key component in implementing remuneration systems and ensuring they align with the business, risk, and remuneration strategies. This Policy establishes the framework for designing and implementing remuneration systems for all employees in scope. For this purpose, "employee" includes executives, non-executive staff, risk takers, and members of the Executive and Supervisory Board. The main objectives are:

- Defining the principles that govern remuneration systems for all employee groups;
- Ensuring that remuneration practices comply with applicable regulations;
- Informing employees about the applicable rules and their remuneration system.

The Remuneration Policy adheres to the CRR and CRD, both in its latest consolidated version, the EBA Guidelines 2021/04 on sound remuneration policies, the LFS, and related CSSF Circulars. In 2025, no external consultant was engaged for the design and implementation of the remuneration framework. The Remuneration Policy is regularly reviewed to ensure compliance with the latest regulations. The Policy is publicly accessible on the Clearstream website.

14.2 Governance

The Supervisory Board is responsible for determining the remuneration system and policy for the members of the Executive Board. In 2025, the Supervisory Board convened three meetings to address remuneration-related topics. It also oversees the remuneration of senior officers in independent control functions, such as Risk Management and Compliance.

The Executive Board decides on the remuneration system and policy for all employee groups, except for the Supervisory Board and Executive Board members. In 2025, the Executive Board held four meetings to discuss remuneration-related matters.

In Q1 2025, both Boards reviewed and approved the Remuneration Policy for 2025. Compared to previous version, this review included editorial changes and clarifications.

As of 31 December 2025, CFCL has not formed a Remuneration Committee as a subcommittee of the Supervisory Board.

The remuneration system has been developed in collaboration with the relevant control units, including the Risk Management, Compliance, and Internal Audit functions.

14.3 Risk taker identification

CFCL performs an annual risk analysis to identify categories of staff whose professional activities significantly impact its risk profile ("risk takers"). These individuals are subject to specific regulatory requirements, except where duly justified exemptions apply.

An employee is classified as risk taker if at least one of the qualitative and quantitative criteria outlined in Regulation (EU) 2021/923 is met. The following categories of staff are identified as risk takers:

- All members of the Executive Board or Supervisory Board;
- All members of the Senior management;
- Employees responsible and accountable to the management body for control activities of the independent risk management function, compliance function or internal audit function;
- Employees heading or having managerial responsibility and whose professional activities are deemed to have a material impact on risk profile of a material business unit;
- Employees heading a (control) function responsible for legal affairs, finance including taxation, budgeting and accounting procedures, human relations, remuneration policy, information technology, information security, the management of outsourcing arrangements, the prevention of money laundering and terrorist financing or economic analysis;
- Employees identified pursuant to quantitative criteria, for example, employees whose total Remuneration exceed criteria set out by regulation and whose professional activities are deemed to have a material impact on CFCL's risk profile.

Risk takers are notified of their identification and the applicable remuneration system.

14.4 Link between performance and remuneration

The remuneration for Executive Board members and employees below this level includes a fixed salary, variable remuneration, and fringe benefits.

Aligned with the remuneration system of the Executive Board of Deutsche Börse Group and financial Key Performance Indicators (“KPIs”), the remuneration system for all executive levels promotes motivational goals and pay-for-performance, ensuring transparency and strict alignment with CFCL’s business and risk strategy. Key elements include:

- **Target amount of variable remuneration:** A target bonus is established, ranging from 0% to 200% of the predefined target, to enhance understanding and transparency of variable remuneration, in line with international market practice;
- **Additive bonus system:** Performance measurement leading to the bonus indication reflects additively and generally three measurement levels to reward individual performance as well as allowing participation in the overall Group and CFCL results;
- **EBITDA and net revenues:** These key elements measure variable remuneration in alignment with the business reporting. Both indicators are of material significance to the successful implementation of CFCL’s strategy and incentivise profitable growth. The growth driven net revenues target is balanced by EBITDA, providing for high performance orientation while maintaining a balanced chance-risk profile;
- **Sustainability targets:** Sustainability aspects are incorporated into variable remuneration to support sustainable development and corporate responsibility.

Variable remuneration shall consider the overall performance of Deutsche Börse Group, and CFCL (derived from the segment) and the respective areas of responsibility covering the individual contributions. All three measurement levels are generally equally weighted, and the allocation considers current and future risks. The evaluation incorporates a balanced mix of financial and non-financial criteria to ensure a comprehensive and responsible assessment of individual performance.

14.5 Performance measurement

When determining individual performance, it should be assessed based on the achievement of a balanced combination of quantitative (financial) and qualitative (non-financial) agreed goals that are both ambitious and challenging. These goals shall align with the business and risk strategy, corporate values, risk appetite, long-term interests, as well as its cost of capital and liquidity position.

The full amount of variable remuneration is subject to an ex-ante risk adjustment in case of negative performance contributions, breaches of duty, or misconduct, and can be reduced to zero before the bonus awarded. Positive performance contributions cannot offset this reduction.

The performance of Executive Board members, risk takers, and other employees is evaluated annually, with results documented and monitored through the appraisal systems. While line managers are responsible for assessing employee performance, the Supervisory Board conducts the evaluations of Executive Board members.

Individual performance is measured through structured appraisal systems. For risk takers in control functions, objectives are set independently from the business areas they oversee to preserve their objectivity and prevent conflicts of interest. These individuals primarily receive control-related targets.

14.6 Total amount of variable remuneration

Variable remuneration must not compromise CFCL's ability to sustainably maintain or restore an adequate capital base. If CFCL's ability to sustainably maintain or recover an appropriate capital base is limited, no variable remuneration is to be granted. The total amount of the variable remuneration shall be determined in a formal, transparent and comprehensible process. Representatives of the relevant control units (for the determination of the bonus pool, performance criteria and remuneration awards) shall be involved within their scope of duties.

The total amount of variable remuneration is determined by summing up the actual individual variable remuneration that shall be awarded to all employees of CFCL whereas such summed up amount is subject to the examination of side conditions, for example, on performance criteria derived from the business and risk strategy in order to promote long-term sustainable success of CFCL and to adequately reflect costs of capital and liquidity as well as risks incurred.

Variable remuneration generally reflects the three measurement levels Deutsche Börse Group, CFCL (derived from segment) and individual goals. It is calculated by multiplying the achievement of targets at both CFCL and individual levels by a risk adjustment factor. This factor is derived from the ratio of VaR to ARBC, along with a liquidity risk indicator, and is assessed monthly using a traffic light system. If a yellow or red signal is triggered, a review is conducted, and a potential reduction factor may be applied.

Variable remuneration considers both current and future risks, as well as corporate values, risk appetite, and long-term interests, aligned with the risk strategy. Current risks are reflected at CFCL and individual levels through the risk adjustment factor and risk-adjusted goals. Future risks are addressed through sustainability reviews and the application of malus and clawback provisions.

14.7 Ratio between fixed and variable remuneration

The ratio between the fixed and the variable remuneration must remain appropriate. Variable remuneration may reach up to 100% of the fixed component. Where permitted by national regulations, the shareholders, owners, or members may approve a 1:2 ratio, allowing variable remuneration to reach a maximum of up to 200% of fixed remuneration in exceptional cases.

14.8 Link to long-term performance

The guidelines for variable remuneration are designed to address potential misalignments between performance periods and the timing of associated risks. To ensure alignment, variable remuneration payments must be appropriately deferred, with pay-out schedules aligned to the duration of the underlying risks. CFCL has implemented a deferral system for risk takers, consistent with the practices of its sister companies within Clearstream Group.

Variable remuneration is not guaranteed, depends on performance, and can result in no payout.

For risk takers, when variable remuneration exceeds 50,000 EUR or one-third of the total remuneration, the following deferral rules apply:

- At least 50% of both deferred and non-deferred variable remuneration shall be linked to the Group's long-term performance, granted as DBAG share-based instruments;

- At least 40% or 60% – depending on the risk taker classification or high amount of variable remuneration – is deferred over period of four to five years, with vesting occurring on a pro rata basis.

Prior to vesting, there is only an entitlement to an accurate determination of the variable remuneration portion. The final award is subject to an assessment of the sustainability of each risk taker’s performance, their specific responsibilities, and the overall performance of CFCL. Additionally, CFCL’s financial condition – including any significant changes in its capital base and financial capacity – is taken into account through a back-testing process.

In the event of a negative back-test, a malus may be applied to all components of deferred remuneration, including both cash and share-based elements. This is particularly relevant in cases involving misconduct, negative performance, significant failures in risk management, or financial downturns. If such circumstances are deemed material, portions of the deferred variable remuneration, including share-based instruments, may be reduced or forfeited.

Repayment obligations (“clawbacks”) are implemented for risk takers in accordance with regulatory requirements. If a risk taker is found to be significantly involved in, or responsible for, actions that result in substantial losses for CFCL, major regulatory sanctions, or severe regulatory breaches, the risk taker is required to repay any variable remuneration already paid out. In such cases, any claim to payment of variable remuneration will lapse. Apart from share-based components, there are no shareholding requirements for identified risk takers.

14.9 Specific elements of variable remuneration

Guaranteed variable remuneration may only be granted in exceptional cases, such as for new hires. It is restricted to a maximum duration of one year and is subject to CFCL maintaining adequate equity, liquidity, and capital to meet its regulatory and operational requirements.

Severance payments are generally classified as variable remuneration. Any payments made in the event of early termination must reflect the individual’s performance over time and must not reward underperformance or misconduct, in line with Article 38-6 (h) LFS.

14.10 Quantitative information

Quantitative remuneration information for CFCL’s identified staff (risk takers, including Group risk takers), who are not Supervisory Board members, is disclosed in EUR. Any remuneration awarded in foreign currencies is converted to EUR and reflects compensation granted for the financial year 2025. The remuneration information in “Template EU REM4 – Remuneration of 1m EUR or more per year” pertains to identified staff holding contracts with CFCL.

To maintain confidentiality and ensure compliance with data protection requirements, remuneration data is presented in an aggregated and rounded format. Minor deviations may occur due to commercial rounding. Disclosure is provided only when the data pertains to at least three employees. The reported risk takers are identified based on their status for the financial year 2025, with full-time equivalent (“FTE”) status as of 31 December 2025.
